Main Project: Geolat – Geography for Latin Literature is a research project, aimed at making accessible a digital library containing the works of Latin literature (from its origins in 240 BCE to the end of the Roman Empire in 476 CE) through a query interface of geographic/cartographic type representing the geographic knowledge expressed in the Latin texts themselves. A core activity of the project has been the development of the ontology GO!, which describes the geographical knowledge contained in the texts of the library.
